

STABILISING AND DRAINAGE MEMBRANE STRATACHECK

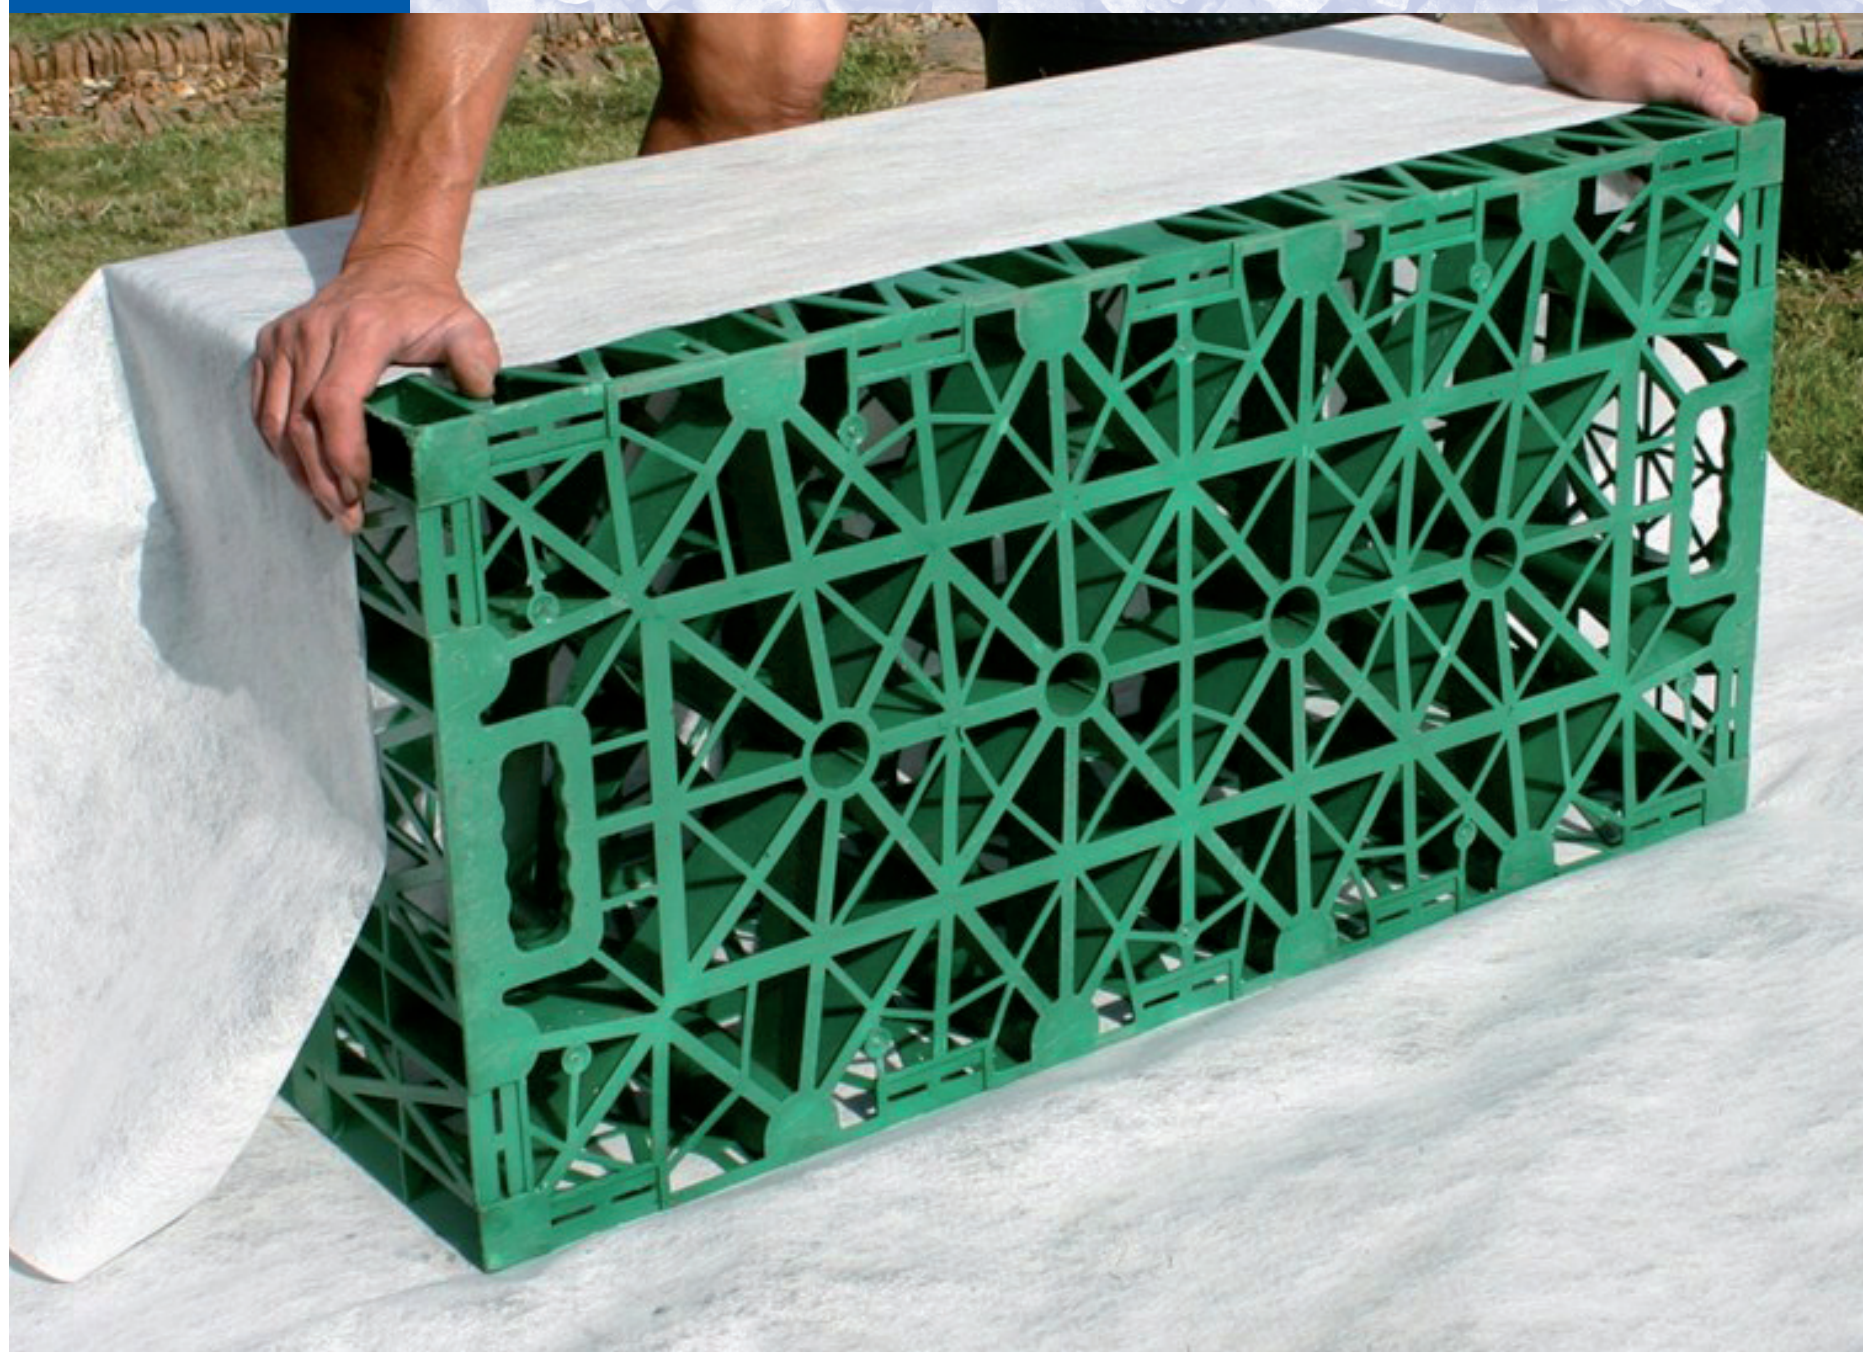

- Stabilising membrane
- The only membrane for all drainage jobs
- High porosity. Conforms with SUDS regulations
- Stabilises slabs and paviers
- Stops decorative aggregates from being lost into the sub-soil
- Reduces the depth of sub-base required
- Can be laid directly under turf

35 YEAR GUARANTEE

Must be covered with a mulch within 48hrs of laying

USES

- Block pavior drives
- Paved drives and patios
- Garden paths
- Childrens play area, sand pits and under safety mulch
- Retaining walls
- Water attenuation & harvesting
- Land drains
- Wrapping soak away crates
- Under turf
- Separating top dressing from Type 1 in a horse manège

USEFUL TIPS

Best to 'Tray up' vertically at the edges ensuring that the aggregate or type 1 is locked in.

STRATACHECK can be used in all applications involving pedestrians and light traffic.

When using under turf which is being laid do not overlap STRATACHECK simply butt the edges as if laying wallpaper.

When constructing a soakaway using plastic crates either wrap each crate individually or line the complete pit and 'parcel' the crates in.

The hole sizes in STRATACHECK have been created to establish a natural land drain within a few months. Because of this STRATACHECK cannot be used where there is a need to stop all weeds from penetrating. For total weed control use WEEDCHECK ULTRA.
